Installation Instructions

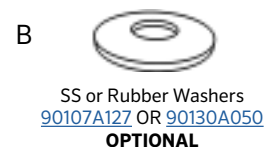

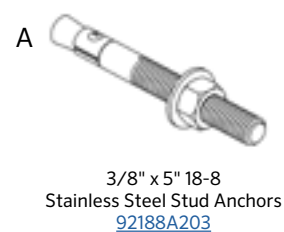

RLA30 - Vibe Bike Rack

TOOLS NEEDED:

HARDWARE NEEDED:

Step -by-Step Installation Sequence

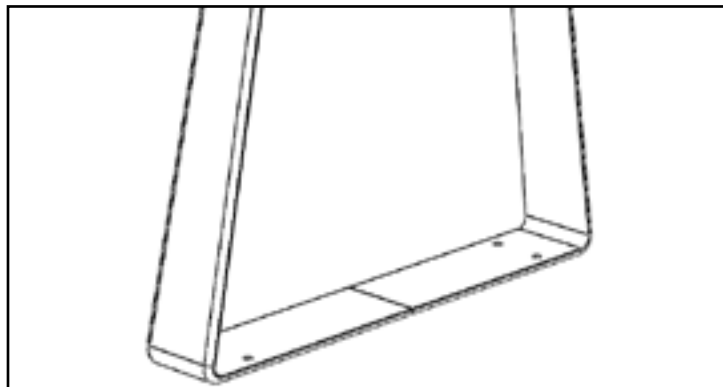

Some products may require assembly before or during installation; please consult the assembly instructions if applicable.

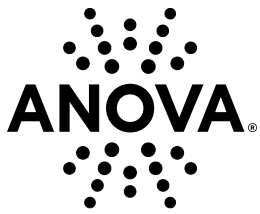

Examine the footing or slab for damage or defects. The footing or slab should be reinforced concrete rated at a 3,000 psi minimum and be cured for at least 28 days prior to the installation of the bench.

CAUTION: Oversized holes and holes drilled too deep in the concrete will make it difficult to set the anchor.

1. Place the product in the desired location. Mark the location of the holes with a pencil. To verify the alignment of your anchor markings, reference the foot mount sheet at the back of these instructions.

2. It is recommended that you start holes in sequential order from the smaller to the larger drill bits to avoid oversized holes or holes drilled to deep.
3. Evacuate debris from the mounting holes using compressed air and a steel wire brush.
4. Locate an anchor and adjust the nut so it is flush to the top of the anchor to protect the threads from being damaged, and insert into the hole.
5. Use the hammer to fix the anchor into the drilled hole by giving it several hammer blows.
6. Repeat steps 2-5 until all anchors are installed.
7. Align the mounting holes of the product over the top of the anchors
8. Care should be taken to avoid rubbing the powder coating off the foot. Mount the product to the anchor using fasteners (B) and washers (C). Leave hardware finger tight until all have been installed.
9. Verify the product is level and aligned properly and tighten all hardware.
